

What to expect from your new puppy. And when to expect it.

Time to switch to Eukanuba Adult Formula?

Most puppies are ready for the transition from puppy food to adult food at these ages:

- Small breeds: 9-12 months
- Medium breeds: 12 months
- Large breeds: 12-24 months

Ask your veterinarian about the best time to switch your puppy to the right Eukanuba Adult formula.

Your puppy, month by month.

This chart can help you know approximately when to expect your puppy to reach key milestones in its young life, and when you can expect to begin teaching specific skills. But every puppy is different – small breeds mature more quickly than large breeds, for example.

Your veterinarian can help. Ask him or her about nutrition, vaccinations, spaying/neutering, or any questions you have about your puppy's behavior or development.

Eukanuba provides lifetime nutrition, customized for small, medium and large breed dogs. That's why your breeder recommends Eukanuba. For more information on nutrition, growth and development, visit www.eukanuba.com.
